

3205, 3404 3205 HIGH SPEED 1 OUT OF 8 BINARY DECODER 3404 HIGH SPEED 6-BIT LATCH

■ 18ns Max. Delay Over 0°C to 75°C

Temperature: 3205

■ 12ns Max. Data to Output Delay Over 0°C to 75°C

Temperature: 3404

■ Directly Compatible With DTL and

TTL Logic Circuits ■ Totem-Pole Output Voltage Diode Input Clamp

■ Outputs Sink 10mA Min.

■ Simple Expansion: Enable Inputs

■ Low Input Load Current: .25mA Max.,

1/6 Standard TTL input Load

■ Minimum Line Reflection: Low

■ 16-Pin Dual In-Line Package

3205

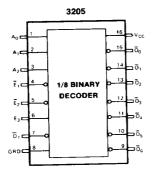

The 3205 decoder can be used for expansion of systems which utilize memory components with active low chip select input. When the 3205 is enabled, one of its eight outputs goes "low", thus a single row of a memory system is selected. The 3 chip enable inputs on the 3205 allow easy memory expansion. For very large memory systems, 3205 decoders can be cascaded such that each decoder can drive 8 other decoders for arbitrary memory expansions.

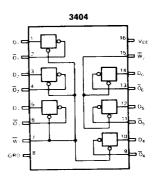

3404

The Intel 3404 contains six high speed latches organized as independent 4-bit and 2-bit latches. They are designed for use as memory data registers, address registers, or other storage elements. The latches act as high speed inverters when the "Write" input is "low".

The Intel 3404 is packaged in a standard 16-pin dual-in-line package; and its performance is specified over the temperature range of 0°C to +75°C, ambient. The use of Schottky barrier diode clamped transistors to obtain fast switching speeds results in higher performance than equivalent devices made with a gold diffusion process.

PIN CONFIGURATION

ABSOLUTE MAXIMUM RATINGS*

Temperature Under Bias: Ceramic -65°C to +125°C

Plastic -65° C to $+75^{\circ}$ C

Storage Temperature -65°C to +160°C
All Output or Supply Voltages -0.5 to +7 Volts

All Output or Supply Voltages -0.5 to +7 Volts
All Input Voltages -1.0 to +5.5 Volts

Output Currents 125 mA

*COMMENT

Stresses above those listed under "Absolute Maximum Rating" may cause permanent damage to the device. This is a stress rating only and functional operation of the device at these or at any other condition above those indicated in the operational sections of this specification is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

D.C. CHARACTERISTICS $T_A = 0^{\circ}\text{C to } +75^{\circ}\text{C}, V_{CC} = 5.0\text{V} \pm 5\%$ 3205, 3404

SYMBOL	PARAMETER	LIMIT			TEST CONDITIONS
		MIN.	MAX.	UNIT	TEST CONDITIONS
I _E	INPUT LOAD CURRENT		-0.25	mA	$V_{CC} = 5.25V, V_{F} = 0.45V$
